

SDF roof and facade system

The SAREI roof and facade system is used to cover and clad subordinate buildings, such as garden sheds.

The system consists, in addition to the roof and facade sheet metal, from a verge sheet and a ridge flashing, which attached to the ridge using a connection profile.

Facade cladding

The SDF system can also be used in the facade area as permanent protection or used as a "chic look".

The panels can be applied both horizontally and vertically take place.

The screw connection is made using facade construction screws.
Requirement: 5 pcs. / Plate

The lateral and upper connection is realised with the SDF connection profiles.

Tip:

The connection profile can also be found in the soffit area "Window & Door".
