

Roof drainage half-round

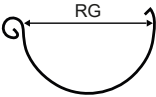

Half-round gutter

The gutter is a component that collects the rainwater running off the roof surface and drains it off the roof via a downpipe to prevent waterlogging.

The individual gutters are connected using gutter connectors, which are attached using gutter supports/holders - also known as gutter irons. Channel end pieces or channel bases ensure a professional finish.

Length: 2 m

	Partiality	RG (gutter size)	Completion	Diameter
	6	150	333 mm	approx. 150 mm
	7	125	285 mm	approx. 125 mm
	8	100	250 mm	approx. 100 mm
	10	75-80	200 mm	approx. 80 mm
