

# Gutter heating

make it easy...

## Optimum frost protection for your gutter

[www.rinnenfrei.de](http://www.rinnenfrei.de)

Produktionsstätte  
Deutschland

The gutter heating keeps the gutter free of ice over the winter and thus prevents frozen gutters from bursting open. Damage caused by falling icicles or frost damage to components and buildings is avoided. The integrated thermostat ensures that the heating system is only switched on when it is really needed - i.e. in the critical temperature range below +3°C ambient temperature. If the temperatures rise above +13°C ambient temperature, the system switches off automatically and thus saves energy in the warm season.

# ICE & SNOW DETECTORS

- Control technology for heating tapes -

5 years  
guarantee

CAREFREE THROUGH THE COLD SEASON

- SIMPLE OPERATION
- SENSOR FOR MEASURING HUMIDITY AND OUTSIDE TEMPERATURE
- SAVE UP TO 80% ENERGY COSTS

#### Contents:

1x control box with 3m connection cable  
1x temperature and humidity sensor with 6m connecting cable

Heating cable sold separately
