

Bird protection / ventilation grille

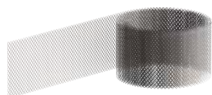

The bird protection / ventilation grille ensures that no birds or other small animals get under the roof covering. It is installed between the roof covering and the eaves. Sufficient ventilation of the roof is guaranteed. The rollers are made of UV-resistant PVC.

Mesh guard

The multi protection grille is a universal profile and is sold in rolls in two different sizes. It serves to protect against insects and small animals as well as a ventilation profile for the roof (according to DIN 4108). It can also be used as a freely formable model and handicraft sheet.
